

Data Sheet

BRAIN2 Safety_Service

Your device backup at the right place. With BRAIN2 Safety_Service you no longer have to deal with device backups. Based on the setting, backups are cyclically created (daily, weekly or monthly) and centrally saved in the BRAIN2 database. To restore a device, the correct backup simply needs to be selected and loaded to the device.

More information
High performance
with a wide range of
solutions and options.

Product description

Device backups on USB sticks or Flash cards are not secure and can get lost. BRAIN2 Safety_Service stores the device backups in the BRAIN2 database. In the management window you can see which backups were pulled and which specific backups can be reloaded. This minimizes downtimes.

Cloning of systems

- Duplication of data and configuration (weigh price labeler/checkweigher)
- Reduction of installation time

Minimizing restoration times

- Restoration via a backup
- Faster troubleshooting

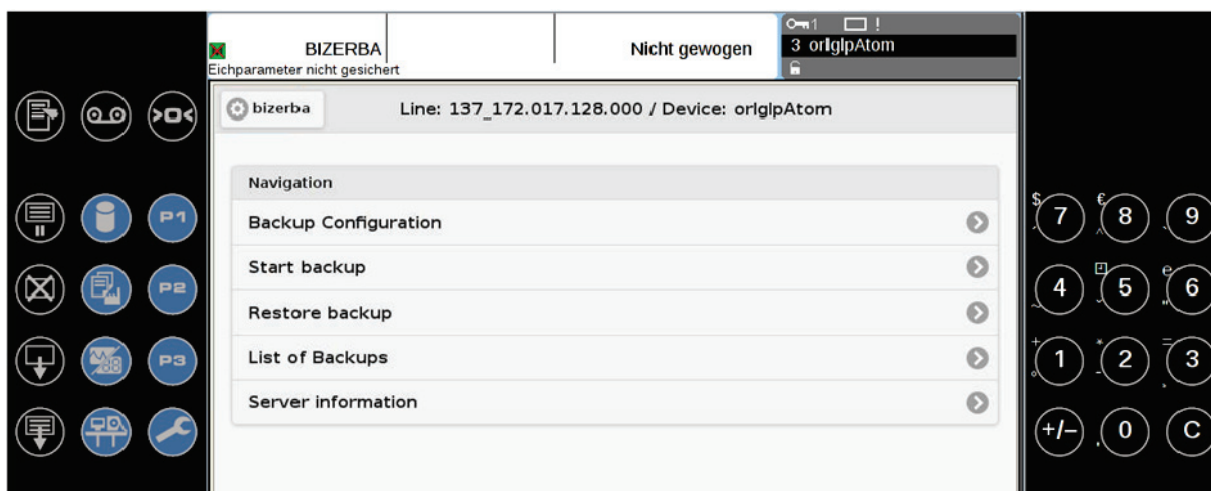

Transparency

- Access control
- Audit Trail (who loaded a restoration)

Functional features

- Automatic creation of backups (daily, weekly, monthly)
- Manual creation of backups on the BRAIN2 Client or device
- Restoration of backups on the Client
- Device backup management
- Access rights for backups

Who loaded the last backup?

BRAIN2 apps are protected by user ID and password. Backups cannot be removed or loaded to a device by unauthorized persons. Moreover, BRAIN2 also stores information on the person responsible for the last backup.
