

Data Sheet

BVS®-L

BIZERBA

The BVS®-L vision system is impressive in terms of its unique inspection performance for various products. It allows synchronous package control from above and below. Due its design the system easily integrates into any production environment.

More information
High performance
with a wide range of
solutions and options.

Product description

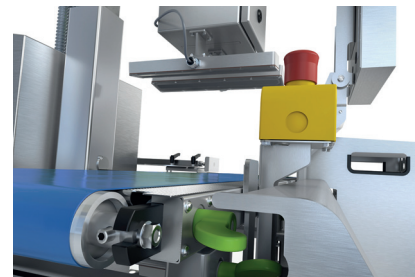

Bizerba BVS®-L offers a high level of flexibility and adaptability to existing systems and can seamlessly be integrated in conveyor lines. The inspection performances of the system are impressive: As compared to random test, all packages are subject to an efficient 100% control with the Bizerba Vision System. Label position and texts are checked automatically. Package size and barcodes are verified. Complete process control is ensured by a statistics report. The result: No more non-conforming packages at the end of the production ramp and increased consumer safety. An important factor in order to meet your company requirements and quality guidelines.

BVS®-L

Highlights

- Synchronous package inspection by means of two cameras
- Parallel view of top and bottom images (individual display option)
- Manual image review possible
- Checking of correct label and label position (twisted, incorrect positioning)
- Correct product packaging guaranteed
- Reading of texts (e.g. sell-by date)
- Checking and classification of barcodes as well as data recognition
- Belt speed of up to 110 m/min possible
- Intuitive operation of user interface Easy teaching of package criteria
- Automatic rejection of packages not conforming with reference criteria
- Seamless integration in Bizerba weigh price labelers
- Data management via industrial software _dataMaintenance.BRAIN
- Creation of reports in _statistics.BRAIN or other statistics programs
- Password protected user management
- Remote service via Internet
- Modular design
